# THE FUTURE OF FISH

## ISSUES FOR RESPONSIBLE INVESTORS

---

Many investors now have policies relating to climate change, ethics and the environment. Few, however, have extended their policy to the sustainability of seafood sourcing, despite the fact that marine products are a key raw material for industries as diverse as agriculture, retail, pharmaceuticals, and pet food. “The Future of Fish”, a report by Responsible Research that will be launched at this event, is intended to galvanise investors into engaging with portfolio companies on seafood sourcing. It provides the ecological context to this crucial sustainability issue, an assessment of policy and practices in each of the relevant sectors and sector-level engagement toolkits. The report gives prime importance to Asia, which is the most significant geography from a consumption and production perspective, and has global relevance for companies and investors.

A Responsible Research report supported by the David & Lucile Packard Foundation

**DATE:** Friday 9th September  
**TIME:** 11.45 - 2.15 pm  
**VENUE:** First State Investments Offices  
6/F., Three Exchange Square,
